

# ***Tribo-MAX***

Nano-Technology Additives

Formulated by: Green Auto Technology

## **The Rundown**

*Tribo-MAX* is formulated as an “Armor harder than diamonds” that activates in your motor and other systems under high heat in the highest friction pressure points to transform the wear areas into a nano-ceramic surface!

Just one particle is about 10x smaller than your red blood cells. Our formulation is capable of permanently bonding to the metal while filling in worn spots up to 0.064” or more.

Our ceramic-armor ***REVERSES*** wear and tear.

You get More **POWER**, Better Mileage and Lower Emissions!

The nano-ceramic surface creates ultra-low friction. After significant research supplied from universities all over the world, we found the friction coefficient decreased to 0.06! Lowest of anything we have ever seen. In turn, our super-lubricant gives you an immediately efficient running vehicle and added insurance against mechanical failure!

Truly the "Holy Grail" of Super Lubricants!

*Tribo-MAX* has two jobs; bond to the metal and provide ultimate lubrication.

### • Restores Compression & Heals Pumps

Compression improves fast! As the compression increases, the blow-by gases reduce greatly. Blow-by gas is known to be detrimental to your oil. When the oil degrades, this transformation becomes a substance that destroys the motor. With the introduction of the additive, the oil is kept

safe from harmful blow-by gases extending the life of the oil, naturally following an extended engine life! In other systems like power steering and coolant, the pumps are restored becoming quietly efficient. The noisy rear ends and 4x4 gears become just as smooth as they were new while extending the life!

- **Permanent**

Permanently bonds to the metal and heals wear and tear. Reversing the age of the motor and other systems making them operate at new condition or better. The *Tribo-MAX* coating becomes inseparable, so it won't flush out at your next fluid change!

- **Selective**

As the oil carries the nano-ceramic around the system, they only bond to the parts with high heat & friction, and this happens fast. They never build up in other areas to be wasted as some additives sadly do. Keep the additive flowing around the system for 1,000 miles to ensure restoration!

- **Safe**

Protects the environment by reducing emissions and fuel consumption. This compound is also biodegradable!

**SPECIAL ORDER:**

2 & 4 stroke formulas, gun-barrel oil, bar and chain oil, just let us know what to formulate for you! Dry applications for bullets, derby cars, skateboard bearings, paint... anything!

\*By the year 2026, market watchers are estimating tribo-ceramics to increase up to a \$286M market value. In fact, ten Fortune 500 companies have already found a use for it and tribo-ceramics is currently being manufactured in 7 different countries. While the higher grade of each type of ceramic costs even more, we have "angel investors" who have supplied us with the purest form, highest grade, and smallest particle size so you receive the BEST and FASTEST results!
